This volume offers a first survey of projects from around the world that seek to implement Creole languages in education. In contrast to previous works, this volume takes a holistic approach. Chapters discuss the sociolinguistic, educational and ideological context of projects, policy developments and project implementation, development and evaluation. It compares different kinds of educational activities focusing on Creoles and discusses a list of procedures that are necessary for successfully developing, evaluating and reforming educational activities that aim to integrate Creole languages in a viable and sustainable manner into formal education. The chapters are written by practitioners and academics involved in educational projects. They serve as a resource for practitioners, academics and persons wishing to devise or adapt educational initiatives. It is suitable for use in upper level undergraduate and post-graduate modules dealing with language and education with a focus on lesser used languages.

Through ten editions, Fox and McDonald's Introduction to Fluid Mechanics has helped students understand the physical concepts, basic principles, and analysis methods of fluid mechanics. This market-leading textbook provides a balanced, systematic approach to mastering critical concepts with the proven Fox-McDonald solution methodology. In-depth yet accessible chapters present governing equations, clearly state assumptions, and relate mathematical results to corresponding physical behavior. Emphasis is placed on the use of control volumes to support a practical, theoretically-inclusive problem-solving approach to the subject. Each comprehensive chapter includes numerous, easy-to-follow examples that illustrate good solution technique and explain challenging points. A broad range of carefully selected topics describe how to apply the governing equations to various problems, and explain physical concepts to enable students to model real-world fluid flow situations. Topics include flow measurement, dimensional analysis and similitude, flow in pipes, ducts, and open channels, fluid machinery, and more. To enhance student learning, the book incorporates numerous pedagogical features including chapter summaries and learning objectives, end-of-chapter problems, useful equations, and design and open-ended problems that encourage students to apply fluid mechanics principles to the design of devices and systems.

Complex Systems are natural systems that science is unable to describe exhaustively. Examples of Complex Systems are both unicellular and multicellular living beings; human brains; human immune systems; ecosystems; human societies; the global economy; the climate and geology of our planet. This book is an account of a marvelous interdisciplinary journey the author made to understand properties of the Complex Systems. He has undertaken his trip, equipped with the fundamental principles of physical chemistry, in particular, the Second Law of Thermodynamics that describes the spontaneous evolution of our universe, and the tools of Non-linear dynamics. By dealing with many disciplines, in particular, chemistry, biology, physics, economy, and philosophy, the author demonstrates that Complex Systems are intertwined networks, working in out-of-equilibrium conditions, which exhibit emergent properties, such as self-organization phenomena and chaotic behaviors in time and space.

This book offers an in-depth treatment of a variety of morpho-syntactic issues in Cape Verdean Creole (CVC) both from a descriptive and theoretical perspective. The investigated topics include the determiner system, Tense, Mood, Aspect markers and pronominal paradigms. The study of TMA markers reveals morpho-syntactic configurations with interesting ramifications for syntactic theory and parametric variation. This book targets creolists, theoretical linguists, and the Cape Verdean community. Given the diversified targeted audience, the descriptive chapters are purposefully kept separate from their theoretical counterparts, presenting issues that are later revisited in the Minimalist framework. The data used in this study are primarily drawn from 83 transcribed interviews from a pool of 187 speakers. The interviews were collected during fieldwork conducted in 1997, 2000 and 2001 in the Cape Verdean Sotavento (leeward) islands representing the more basilectal varieties of the creole. As all natural languages, CVC displays syntactic similarities and differences with other creoles and noncreoles. Hence, in the spirit of comparative syntax, this volume compares CVC to other creoles like Guinea-Bissau Creole and to noncreoles like Portuguese, French, Icelandic and Italian dialects.

This series explores architecture; furniture; and interior, graphic, and industrial design with the intention of reflecting the wealth and diversity found in the extensive panorama of contemporary design. Featured designers are chosen on the basis of their originality and their accomplishments. Each book starts with an introductory essay by a well-known critic or designer. The designers themselves stylize the presentation and decide what material will be included -- therefore presenting not only a reference text, but also exhibiting another aspect of the designer's creative vision.
