In the middle of the nineteenth century, the Russian empire made a dramatic advance on the Pacific by annexing the vast regions of the Amur and Ussuri rivers. Although this remote realm was a virtual terra incognita for the Russian educated public, the acquisition of an 'Asian Mississippi' attracted great attention nonetheless, even stirring the dreams of Russia's most outstanding visionaries. Within a decade of its acquisition, however, the dreams were gone and the Amur region largely abandoned and forgotten. In an innovative examination of Russia's perceptions of the new territories in the Far East, Mark Bassin sets the Amur enigma squarely in the context of the Zeitgeist in Russia at the time. Imperial Visions demonstrates the fundamental importance of geographical imagination in the mentalité of imperial Russia. This 1999 work offers a truly novel perspective on the complex and ambivalent ideological relationship between Russian nationalism, geographical identity and imperial expansion.

Completely revised and updated, this groundbreaking self-published book has sold more than 15,000 copies through limited exposure and distribution. Electrical Nutrition outlines the authors' revolutionary theories on health and nutrition based on an electrical model. Everything we think, feel, eat, and do

triggers electrical responses in our bodies. Each of our cells is electrically charged, and therefore the electrical availability of what we eat has a profound effect on our health, vitality, and well-being. Instead of focusing on the chemical reactions that occur in every system of the human body, the authors contend that there is a simultaneous electrical reaction that has an equally, if not even more, important impact on our ability to digest and benefit from the food we consume. Any interruption to the flow of the body's natural electrical circuitry will have a negative effect on a cellular level which, in turn, will promote disease. Electrical Nutrition offers a practical program that includes menu plans and a listing of the best "electrically available" foods—a plan that will dramatically increase stamina, vitality, and even libido. By eliminating foods that are "electrically dead," we can rid the body of toxins that promote obesity and a host of illnesses, from chronic fatigue to heart disease, while boosting the body's natural energy and immune function.

Traditional reliance on chemical analysis to understand the direction and extent of treatment in a bioremediation process has been found to be inadequate. Whereas the goal of bioremediation is toxicity reduction, few direct, reliable measures of this process are as yet available. Another area of intense discussion is the assessment of market forces contributing to the acceptability of bioremediation. Finally, another important component is a series of lectures and lively exchanges devoted to practical applications of different bioremediation technologies. The range of subjects covers a wide spectrum, encompassing emerging technologies as well as actual, full-scale operations. Examples discussed include landfarming, biopiling, composting, phytoremediation and mycoremediation. Each technology is explored for its utility and capability to provide desired treatment goals. Advantages and limitations of each technology are discussed. The concept of natural attenuation is also critically evaluated since in some cases where time to remediation is not a significant factor, it may be an alternative to active bioremediation operations.

The book entitled “Current Debates In Tourism & Development Studies” includes 10 chapters written by researchers in the field of tourism and development. It is divided into four themes, each theme exploring current tourism and development issues that are of critical importance. The key themes of the book concern transforming tourism-resident perception (theme 1), alternative tourism (theme 2), event tourism and destination image (theme 3), and development studies (theme 4). The book has following specific objectives: (a) to identify and analyze the current debates of tourism; (b) to examine current key tourism trends, issues and challenges; (c) to provide comprehensive review of tourism and development over the years; (d) to implement rural development, behavioral economics and demographic dividend and economic growth issues. It is our strong believe that these chapters will contribute to the understanding of current debates in tourism and development. Furthermore, each chapter in the book will make a significant platform for both tourism industry and academia.

This is the second of a three-volume comprehensive reference work on “Gender across Languages”, which provides systematic descriptions of various categories of gender (grammatical, lexical, referential, social) in 30 languages of diverse genetic, typological and socio-cultural backgrounds. Among the issues discussed for each language are the following: What are the structural properties of the language that have an impact on the relations between language and gender? What are the consequences for areas such as agreement, pronominalisation and word-formation? How is specification of and abstraction from (referential) gender achieved in a language? Is empirical evidence available for the assumption that masculine/male expressions are interpreted as generics? Can tendencies of variation and change be observed, and have alternatives been proposed for a more equal linguistic treatment of

women and men? This volume (and the previous two volumes) will provide the much-needed basis for explicitly comparative analyses of gender across languages. All chapters are original contributions and follow a common general outline developed by the editors. The book contains rich bibliographical and indexical material. Languages of Volume 2: Chinese, Dutch, Finnish, Hindi, Icelandic, Italian, Norwegian, Spanish, Vietnamese, Welsh.

The historic phenomenon of pilgrimage is experiencing a resurgence around the world. A journey resulting from religious causes, it not only provides a spiritual experience, but also one of new environments, cultures and peoples, and is often undertaken as a guided tour. Yet pilgrimage as a mode of tourism has been little investigated. This book adds considerably to our knowledge by focusing on one specific pilgrimage voyage - that to the Holy Land during times of security crisis there. In doing so, it examines this tourism journey in relation to constraints and high levels of risk experienced by the pilgrims. It explores both the behavioural aspects of undertaking pilgrimage to such an insecure situation and the impacts of such crisis on the host tourism infrastructure and industry. It therefore not only provides insights into pilgrimage as tourism - and into this particular country's experience - but also offers an integrative approach to tourism crisis management.

This book highlights current Cannabis research: its botany, authentication, biotechnology, in vitro propagation, chemistry, cannabinoids biosynthesis, metabolomics, genomics, biomass production, quality control, and pharmacology. Cannabis sativa L. (Family: Cannabaceae) is one of the oldest sources of fiber, food and medicine. This plant has been of interest to researchers, general public and media not only due to its medicinal properties but also the controversy surrounding its illicit use. Cannabis has a long history of medicinal use in the Middle East and Asia, being first introduced as a medicine in Western Europe in the early 19th century. Due to its numerous natural constituents, Cannabis is considered a chemically complex species. It contains a unique class of terpeno-phenolic compounds (cannabinoids or phytocannabinoids), which have been extensively studied since the discovery of the chemical structure of tetrahydrocannabinol (Δ^9 -THC), commonly known as THC, the main constituent responsible for the plant's psychoactive effects. An additionally important cannabinoid of current interest is Cannabidiol (CBD). There has been a significant interest in CBD and CBD oil (extract of CBD rich Cannabis) over the last few years because of its reported activity as an antiepileptic agent, particularly its potential use in the treatment of intractable epilepsy in children.

Handbook of Cannabis and Related Pathologies: Biology, Pharmacology, Diagnosis, and Treatment is the first book to take an interdisciplinary approach to the understanding of cannabis use and misuse. Recent worldwide trends toward decriminalizing marijuana for medical use have increased legal use of the drug and recreational use remains high, making cannabis one of the most commonly used drugs. Cannabis has a wide range of adverse neurological effects, and use and abuse can lead to physical, social, and psychopathological issues that are multifarious and complex. Effective understanding and treatment requires knowledge of the drug's effects from across scientific disciplines. This book provides an overview of the biological and pharmacological components of the cannabis plant, outlines its neurological, social, and psychopathological effects, assists in the diagnosis and screening for use and dependency, and aids researchers in developing effective treatments for cannabis-related issues and disorders. Fully illustrated, with contributions from internationally recognized experts, it is the go-to resource for neuroscientists, pharmacologists, pathologists, public-health workers, and any other researcher who needs an in-depth and cross-disciplinary understanding of cannabis and its effects. Comprehensive chapters include an abstract, key facts,

mini dictionary of terms, and summary points Presents illustrations with at least six figures, tables, and diagrams per chapter Provides a one-stop-shopping synopsis of everything to do with cannabis and its related pathology, from chemicals and cells, individuals and communities, and diagnosis and treatment Offers an integrated and informed synopsis of the complex issues surrounding cannabis as a substance, its use, and its misuse
