This book collects a selection of the best articles presented at the CUPUM (Computers in Urban Planning and Urban Management) conference, held in the second week of July 2013 in Utrecht, the Netherlands. The articles included were selected by external reviewers using a double blind process.

This volume comprehends a selection of papers presented during the 26th International Cartographic Conference held in Dresden from the 26th to the 30th of August 2013. It covers many fields of relevant Mapping and GIS research subjects, such as cartographic applications, cartographic tools, generalisation and update Propagation, higher dimensional visualisation and augmented reality, planetary mapping issues, cartography and environmental modelling, user generated content and spatial data infrastructure, use and usability as well as cartography and GIS in education.

Urban networks, network cities, networked cities and city networks are widely discussed, but there has hardly been debate on what constitutes an urbanism of networks. It is time to shift network urbanism from the realm of general debate to that of identifying the task-specific tools and techniques required for its implementation. Urban Networks - Network Urbanism provides theoretical groundwork, historical perspective, detailed arguments and explanatory case descriptions for network-oriented thinking in developing urban and regional spatial strategies. The key argument is that the development of technical networks and urban development go hand in hand and need to be dealt with as such by urban planners. This book gives special attention to the territorial effects caused by the automobile system and to the geography of

Where To Download Postgis 2 An Lisis Espacial Avanzado

ICT. It provides pointers to deal with the huge challenges facing urban planning with regard to changes of scale, technological progress, the "two-track city", and network liberalisation.

The joint symposium of ICA commissions is always one of the most important event for cartographers. This joint seminar in Orleans was connected to 25th International Cartographic Conference, Paris. Works were presented by members of the commissions on: Cartography and Children, Cartographic Education and Training, Maps and the Internet, Planetary Cartography, Early Warning and Disaster Management.

Diving deep into the JavaScript language to show you how to write beautiful, effective code, this book uses extensive examples and immerses you in code from the start, while exercises and full-chapter projects give you hands-on experience with writing your own programs. --

Editor Richard K. Brail has brought together the wisest of the field's thinkers, the most inventive of the toolmakers, the most experienced of those working at the interface with real clients, and the most battle-seasoned practicing planners (and many of these individuals occupy more than one of these niches). Together they present a broad view of support systems, in-depth developmental histories of the most important models and tools as told by their creators, and a provocative, in-the-trenches critique of the state of the art.

This is a hands-on book about ArcGIS that you work with as much as read. By the end, using Learn ArcGIS lessons, you'll be able to say you made a story map, conducted geographic analysis, edited geographic data, worked in a 3D web scene, built a 3D model of Venice, and more.
