This book addresses the problems of the nature of the category of aspect, its formal expression and its relation to Action modes, to the Aorist/Imperfect and Perfect/Non-Perfect distinctions. The discussion is largely based on data from Bulgarian - a Slavonic language where aspect as a grammatical category systematically coexists not only with verbal prefixation, but also with temporal boundedness, correlation and, in the nominal sphere, definiteness. Cross-language parallels with English and French data and the mapping of Bulgarian structures to notions drawn from the «western» tradition of aspectual study result in the outline of a framework for an integrated study of the expression of aspectuality in languages belonging to different language groups. Refuting existing views of aspect as a «compensatory» phenomenon for nominal definiteness, the book presents arguments in favour of a systematic relation between verbal prefixation and NP quantification in Slavonic languages and of a compositional, syntactic dimension of aspectual analysis.

For a decade, Gordon Brown was British Prime Minister Tony Blairs right-hand man--the Iron Chancellor who piloted the British economy through years of growth and prosperity. But behind the scenes, a bitter power struggle between the two men was rocking the foundations of the governing Labour Party. In 2007, Blair resigned, and Brown, at last, had his chance at the top job. In taking over as the Queens First Minister, however, he had to deal with the mixed legacy left by his former boss, including Blairs controversial support for U.S. President George W. Bushs war in Iraq. "Gordon Brown" examines his journey from a remote Scottish parsonage to 10 Downing Street, and looks at the starkly different way Brown approaches politics compared to his more charismatic predecessor.

For those who've never read the Bible and for those who've read it too much. Lacey's "dangerously real" retelling of Scripture vividly demonstrates that the Bible is packed full of stories, poems, and images that resonate with the big issues of today. This fresh paraphrase-come-running-commentary brings the text alive: Bible stories are retold as mini blockbusters; psalms as song lyrics; epistles as emails; Revelation as seen through a virtual reality headset. Out with stale religious terms, here's a "Bible" which talks today's language-gritty, earthy, and witty. Enough starting at Genesis with good intentions and getting lost in Leviticus-Lacey succeeds in revitalizing a classic work by focusing on the big picture: fast-forwarding through the "slow-moving" bits with pace, passion, and energy to make the Bible a page turner. Lacey's tour de force was created during a remarkable personal journey through terminal cancer: the stuff Bible stories are made of. This life-experience injects Lacey's take on Scripture with authenticity and authority-resonating with Bible characters who also wrestled with the big questions. Purist alert: This is not THE Bible (capital B)... but it might just get you reaching for one.

Looks at the threats to the world's supply of freshwater, including the impact of pollution, wetlands drainage, global warming, and population growth on this valuable natural resource.

What can infants hear? What are their reactions to music? Is it useful for them to sing and listen to music? Is their auditory sensitivity developed before their birth? At what age do they start singing, and clapping their hands? How can their musical development be improved? These (and other) questions are present in today's debate on music education and the responses are normally given in an intuitive way. It is now necessary and urgent to sketch a developmental profile of infants, starting from their earliest manifestations. In the last 30 years, research in this field has been progressively developed. In most cases research has been devoted to single aspects of more complex problems. Moreover, it has been based on non-homogeneous categories of subjects and by different methods. Motivated by the fact that many open problems need to be solved, Professor Tafuri decided, in 1998, to begin a longitudinal research project devoted to studying the musical development in children from 0 to 6 years, with particular attention on the ability to sing in tune. During these 6 years, the children would have a regular music education experience with their mothers and often other members of the immediate family. This book has two main areas of focus. The first reconstructs the development of human musical abilities. Tafuri systematically reports studies of the development of vocal, rhythmic and motor abilities through the observation of the same participants for three years, beginning with the mothers' experiences in the last three months of pre-natal life. The programme of musical activities and the modalities of the collaboration with the parents are described. The second area of focus puts forward an educational perspective based on the results of the research. The amount and the quality of the collected data can allow parents and educators to plan different activities by considering the starting point for individual participants and the development of the

Through close readings of Jewish, Christian, Islamic, and Buddhist texts, Katherine Wills Perlo proves that our relationship with animals shapes religious doctrine, particularly through the tension between animal exploitation and the bonds of kinship. She pinpoints four different strategies for coping with this conflict. The first is aggression, in which a divinely conferred superiority or karma justifies animal usage. The second is evasion, which emphasizes benevolent aspects of the human-animal relationship within the exploitative structure, such as the image of Jesus as a "good shepherd." The third is defense, which acknowledges the problematic nature of killing, leading many religions to adopt a propitiation mechanism, such as apologizing for sacrifice. And the fourth is effective-defensive, which recognizes animal abuse as inherently unethical. As humans feel more empathy toward animals, Perlo finds that adherents revise their interpretations of religious texts. Preexisting ontologies, such as Christianity's changing God or Buddhism's principle of impermanence, along with advances in farming practices and technology, also encourage changes in treatment. As cultures begin to appreciate the different types of perception and consciousness experienced by nonhumans, definitions of reality become complicated and humans lean more toward unitary accounts of shared existence. These evolving attitudes exert a crucial influence on religious thought, Perlo argues, moving humans ever closer to a non-speciesist world.
